Legacy woodland grants and obligations - GOV.UK

Of course, full planning permission is required to develop residential property on a farm, so it's an area of agricultural conveyancing with which we are extremely familiar. There is also a new class of permitted development called 'Class Q Permitted Development' with a more relaxed view when the change is specifically related to converting existing agricultural buildings into new dwellings.

Agricultural Land Development | Agricultural Land Change ...

The Pontbren Project - describes a collaborative approach to woodland management and tree planting taken by farmers to improve the efficiency of upland livestock farming. The webinar How Trees Can Improve the Resilience of your Farm provides pointers on how you can use trees to improve your farm land and farm management.

Managing your on-farm woodland | Agrigology

Mature woodland can provide a backdrop for income generating recreational activities such as glamping, high wire experiences and forest schools. Careful planning is vital, however, to avoid damaging the woodland habitat. An early conversation with the local planning authority is highly advisable. 3.

Woodland Friends Welcome Bulletin Board - Creative ...

Forestry is the poor cousin of agriculture, in planning policy — it seems to have been included as an afterthought. Whereas agriculture is clearly and sensibly defined in Section 336 of the Town and Country Planning Act 1990, there is no statutory definition of forestry anywhere in planning law — so whether you are pruning a tree, making charcoal, or teaching woodland management in a ...

A Welcome Permissiveness Within Our Forests

The Farm Woodland Forum aims to facilitate the generation and exchange of information that supports best practice in and improves opportunities for farming with trees. We are an informal group of farmers, foresters and researchers with a common interest in farming with trees in all its aspects.

Farm Woodland Forum

The plan will help them control deer populations in order to secure the regeneration of broadleaved and/or diverse conifer species. This grant is for the work required to carry out the population survey and baseline damage assessment at a landscape scale. The aim of the Deer Management Plan must be to reduce deer densities to an agreed target.

The primary objective of this book is to offer practical means for strengthening the economics and policy dimension of the agroforestry discipline. This book, written by the leading experts in economics and agroforestry, encompasses case studies from Australia, China, Kenya, India, Indonesia, Malawi, Mexico, Micronesia, Tanzania, United Kingdom, United States, Zambia, and Zimbabwe. The applied economic methodologies encompass a wide variety of case studies including enterprise/farm budget models through Faustmann models, Policy Analysis Matrix, production function approach, risk assessment models, dynamic programming, linear programming, meta-modeling, contingent valuation, attribute-based choice experiments, econometric modeling, and institutional economic analysis. It is our belief that these methodologies help agroforestry students and professionals conduct rigorous assessment of economic and policy aspects of agroforestry

systems and to produce less biased and more credible information. Furthermore, the economic and policy issues explored in the book – profitability, environmental benefits, risk reduction, household constraints, rural development, and institutional arrangements – are central to further agroforestry adoption in both tropical and temperate regions. All of the chapters in this volume were subject to rigorous peer review by at least one other contributing author and one external reviewer. We would like to acknowledge the indispensable collaboration of those who provided careful external reviews: Ken Andrasko, Chris Andrew, Peter Boxall, Norman Breuer, Bill Hyde, Tom Holmes, Sherry Larkin, Jagannadharao Matta, Venkatrao Nagubadi, Roz Naylor, Thomas Randolph, Gerald Shively, Changyou Sun, Bo Jellesmark Thorsen, and Yaoqi Zhang. All reviews were coordinated by the book editors.

The increasing importance of biomass as a renewable energy source has led to an acute need for reliable and detailed information on its assessment, consumption and supply. Responding to this need, and overcoming the lack of standardised measurement and accounting procedures, this best-selling handbook provides the reader with the skills to understand the biomass resource base, the tools to assess the resource, and explores the pros and cons of exploitation. This new edition has been fully updated and revised with new chapters on sustainability methodologies. Topics covered include assessment methods for woody and herbaceous biomass, biomass supply and consumption, land use change, remote sensing techniques, food security, sustainability and certification as well as vital policy issues. The book includes international case studies on techniques from measuring tree volume to transporting biomass, which help to illustrate step-by-step methods. Technical appendices offer a glossary of terms, energy units and other valuable resource data.
