There are significant concerns regarding the potential side effects from the chronic use of conventional drugs such as corticosteroids, especially in children. Herbal therapy is less expensive, more readily available, and increasingly becoming common practice all over the world. Such practices have both their benefits and risks. However, herbal self-therapy might have serious health consequences due to incorrect self-diagnosis, inappropriate choice of herbal remedy or adulterated herbal product. In addition, absence of clinical trials and other traditional safety mechanisms before medicines are introduced to the wider market results in questionable safe dosage ranges which may produce adverse and unexpected outcomes. Therefore, the use of herbal remedies requires sufficient knowledge about the efficacy, safety and proper use of such products. Hence, it is necessary to have baseline data regarding the use of herbal remedies and to educate future health professionals about various aspects of herbal remedies.

By means of electrochemical treatment, crystalline silicon can be permeated with tiny, nanostructured pores that entirely change the characteristics and properties of the material. One prominent example of this can be seen in the interaction of porous silicon with living cells, which can be totally unwilling to settle on smooth silicon surfaces but readily adhere to porous silicon, giving rise to great hopes for such future applications as programmable drug delivery or advanced, braincontrolled prosthetics. Porous silicon research is active in the fields of sensors, tissue engineering, medical therapeutics and diagnostics, photovoltaics, rechargeable batteries, energetic materials, photonics, and MEMS (Micro Electro Mechanical Systems). Written by an outstanding, well-recognized expert in the field, this book provides detailed, step-by-step instructions to prepare and characterize the major types of porous silicon. It is intended for those new to the fi eld. Sampling of topics covered: * Principles of Etching Porous Silicon * Etch Cell Construction and Considerations * Photonic Crystals, Microcavities, and Bragg Stacks Etched in Silicon * Preparation of Free-standing Films and Particles of Porous Silicon * Preparation of Photoluminescent Nanoparticles from Porous Silicon * Preparation of Silicon Nanowires by Electrochemical Etch of Silicon * Surface Modifi cation Chemistry and Biochemistry * Measurement of Optical Properties * Measurement of Pore Size, Porosity, Thickness, Surface Area The whole is backed by a generous use of color photographs to illustrate the described procedures in detail, plus a bibliography of further literature pertinent to a wide range of application fi elds. For materials scientists, chemists, physicists, optical physicists, biomaterials scientists, neurobiologists, bioengineers, and graduate students in those fields, as well as those working in the semiconductor industry.

The book will appeal to corporate managers who must manage issues and controversies involving outside groups and organizations The book shows practitioners how to ground their strategic advice on the kind of empirical research that reveals the socio-political dynamics of the issue. It is the first book to approach issues management from a blended application of advances in institutional theory, social movement theory, stakeholder theory and social network analysis.

Questions about change in social and personal life are a feature of many accounts of the contemporary world. While theories of social change abound, discussions about how to research it are much less common. This book provides a timely guide to qualitative methodologies that investigate processes of personal, generational and historical change. The authors showcase a range of methods that explore temporality and the dynamic relations between past, present and future. Through case studies, they review six methodological traditions: memory-work, oral/life history, qualitative longitudinal research, ethnography, intergenerational and follow-up studies. It illustrates how these research approaches are translated into research projects and considers the practical as well as the theoretical and ethical challenges they pose. Research methods are also the product of times and places, and this book keeps to the fore the cultural and historical context in which these methods developed, the theoretical traditions on which they draw, and the empirical questions they address. Researching Social Change is an invaluable resource for researchers and graduate students across the social sciences who are interested in understanding and researching social change.

Ana Rossetti is a unique phenomenon in Spanish culture, a performer and a writer who resists categorization within any single genre, gender, period, or medium. One of the most exciting Spanish writers of the last twenty-five years, Rossetti can be both transgressive and playful, employing erotic signs (fetishes, taboos) derived from fashion, literature, design, pornography, psychology, theater, drag, and Catholicism to destabilize critical, analytic, political, social, and gender categories. Critics, however, have faced a dilemma that this book seeks to overcome: how to define her work - which bridges high and low cultures and includes poetry, fiction, essay, fashion, drama, children's literature, and opera - without resorting back to the very categories that her own artistic practice questions.

Drawing on insights from quantum physics, deep ecology, and the new cosmology, they articulate a new vision of liberating action. Hathaway and Boff lay out a path of spiritual renewal, ecological transformation, and authentic liberation.

A follow up to Public Health Evidence: Tackling Health Inequalities, this book builds on the themes already introduced, and provides a broader perspective on an evidence-based approach to public health, concentrating on health inequalities.
