The Nature and Power of Interests 3 To quantitatively evaluate the effect size of this inter-est-performance relationship, we conducted a meta-analysis on studies that examined the correlation between interests and performance over the past 70 years, dating from Strong's pioneering work up to the present time (Nye et al., 2012).

The Nature and Power of Interests

Power itself is a basic ontological concept and, like being, indefinable. However, we can bracket its qualities to provide meaning and understanding of its nature, and thus power functions as "linkage," as "will-to-completeness," as imminent "energy," as "strength-of-becoming," and as "force-towards-identity."

Power and Human Nature - JSTOR

Sociologists are today concerned to analyse the diverse nature of power and that complexities it creates in human relationships, especially between state and society. In the very simple language, power is the ability to get one's way—even if it is based on bluff. It is the ability to exercise one's will over others or, in other words ...

53 Best Nature Quotes - Inspirational Sayings About Nature

It's become nearly impossible to espouse the physical and mental healing powers of nature without sounding a tad woo-woo. Cities are our lives now, with urban areas serving as home to 84 percent of Americans. In the brief history of our country, we've lost touch with nature and, perhaps more

problematic, we've lost the space needed for nature to exist in our everyday lives.

Nature and Power traces the expanding scope of environmental action over the course of history: from initiatives undertaken by individual villages and cities, environmental policy has become a global concern. Efforts to steer human use of nature and natural resources have become complicated, as Nature and Power shows, by particularities of culture and by the vagaries of human nature itself. Environmental history, the author argues, is ultimately the history of human hopes and fears.

Built around three sacred springs, the Jin Shrines complex (Jinci), near Taiyuan in Shanxi province, contains a wealth of ancient art and architecture dating back to the Northern Song dynasty (960–1127). The complex's 1,500-year-long textual record allows us to compare physical and written evidence to understand how the built environment was manipulated to communicate ideas about divinity, identity, and status. Jinci's significance varied over time according to both its patrons' needs and changes in the political and physical landscape. The impact of these changes can be read in the physical development of the site. Using an interdisciplinary approach drawing on the research of archaeologists, anthropologists, and religious, social, and art historians, this book seeks to recover the motivations behind the creation of religious art, including temple buildings, sculpture, and wall paintings. Through an examination of building style and site organization, the author illuminates the multiplicity of meanings projected by buildings within a sacred landscape and the ability of competing patronage groups to modify those meanings with text and context, thereby affecting the identity of the deities housed within them. This study of the art and architecture of Jinci is thus about divine creations and their power to create divinity.

We are at an environmental impasse. Many blame our personal choices about the things we consume and the way we live. This is only part of the problem. Different forms of social power - political, economic and ideological - structure the choices we have available. This book analyses how we make social and environmental history and why we end up where we do. Using case studies from different environmental domains - earth and water, air and fire - Nature, Choice and Social Power examines the form that social power takes and how it can harm the environment and hinder our efforts to act in our own best interests. The case studies challenge conventional wisdoms about why gold is valuable, why the internal combustion engine triumphed, and when and why suburbs sprawled. The book shows how the power of individuals, the power of classes, the power of the market and the power of the state at different times and in different ways were critical to setting us on a path to environmental degradation. It also challenges conventional wisdoms about what we need to do now. Rather than reducing consumption and shrinking from outcomes we don't want, it proposes growing towards outcomes we do want. We invested massive resources in creating our problems; it will take equally large investments to fix them. Written in a clear and engaging style, the book is underpinned with a political economy framework and addresses how we should understand our responsibility to the environment and to each other as individuals within a large and impersonal system.
