These days various trends are in vogue in the field of education and on the books on education. But the most neglected field is of adult education and social education. As India possesses the largest number of illiterate adult persons in the world the relevance of adult education is self understood. The field of social education is also neglected and the general public is still unaware of the problems hovering over society and the modern days' paradoxes. As the globalization and industrialisation has set in the great social upheaval is in the offing. We are

witnessing the technological revolution, information and communication revolution, the revolution in the market and at the home. This book tries to do justice with the problems in the field of adult education and social education. It is a small but compact book which covers many aspects of adult education and social education. It is hoped that this book will be liked by educators, education administrators, and the researchers in the field of education.

Despite technology's presence in virtually every public school, its documented familiarity and use by youth outside of school, and the wealth of resources it provides for teaching social studies, there has been relatively little empirical research on its effectiveness for the teaching and learning of social studies. In an effort to begin to fill this gap in research literature, this book focuses on research on technology in social studies education. The objectives of this volume are threefold: to describe research frameworks, provide examples of empirical research, and chart a course for future research endeavors. Accordingly, the volume is divided into three overarching sections: research constructs and contexts, research reports, and research reviews. The need for research is particularly acute within the field of social studies and technology. As the primary purpose of social studies is to prepare the young people of today to be the citizens of tomorrow, it is necessary to examine how technology tools impact, improve, and otherwise affect teaching and learning in social studies. Given these circumstances, we have prepared this collection of research conceptualizations, reports, and reviews to achieve three goals. 1. Put forward reports on how research is being conducted in the field 2. Present findings from well-designed research studies that provide evidence of how specific applications of technology are affecting teaching and learning in social studies. 3. Showcase reviews of research in social studies It is with this framework that we edited this volume, *Research on Technology and Social Studies Education*, as an effort to address emerging concerns related to theorizing about the field and reporting research in social studies and technology. The book is divided into four sections. The first section of the book includes three descriptions of research constructs and contexts in social studies and technology. The second section is focused on research reports from studies of student learning in social studies with technology. The third section contains research reports on teachers' pedagogical considerations for using technology in social studies. In the fourth and final section, we present work that broadly reviews and critiques research in focused areas of social studies and technology. This volume contains twelve chapters, each of which focuses on social studies content and pedagogy and how the field is affected and enhanced with technology. The volume includes research and theoretical works on various topics, including digital history, digital video, geography, technology use in the K-12 social studies classroom, and artificial intelligence.

Streamlined ID: A Practical Guide to Instructional Design presents a focused and generalizable approach to instructional design and development – one that addresses the needs of ID novices, as well as practitioners in a variety of career environments. Emphasizing the essentials and "big ideas" of ID, *Streamlined ID* presents a new perspective – one that aims to produce instruction that is sustainable, optimized, appropriately redundant, and targeted at continuous improvement. The book features an enhanced version of the classic ADDIE model (Analysis, Design, Development, Implementation, and Evaluation) that emphasizes the iterative nature of design and the role of evaluation throughout the design/development process. It clearly lays out a systematic approach that emphasizes the use of research-based theories, while acknowledging the need to customize the process to address a variety of pedagogical approaches: Instructivist, Constructivist, and Connectivist. The book opens with an overview of the basics of ID and each subsequent chapter describes major activities in the ID process with step-by-step instructions and tips for streamlining the process. Numerous job aids serve to maximize the efficiency and effectiveness of your design efforts. Each chapter highlights key concepts and provides additional exercises and assignments based on the work of Benjamin Bloom. *Streamlined ID* is an ideal reference guide for optimizing professional practice.
